Interested in learning more about ACC’s Electrical Systems Technology program?

If you’re interested in ACC’s Electrical Systems Technology Bachelor’s Degree, but just not sure if it’s the right fit for you or what the field is really like, we’d like to invite you to hear from someone in the industry!

Bob Johnson, a Consumers Energy employee who works in the Electric Field Lab in Traverse City, is coming to ACC to talk with students and prospective students about how to transition from school into the field.

Johnson will talk about the number of jobs available, and would like to talk with any student interested in a career in the electrical systems industry. He is involved in the hiring process at Consumers and is excited about our new Bachelor’s Degree program! “We hired an ACC graduate from a few years ago and we have been very pleased at his training. As I look at ACC’s curriculum, I am really impressed. We have historically had problems finding qualified candidates when we do have job postings.”

If you would like to learn more about the opportunities of a degree in Electrical Systems Technology, he will be meeting with students at 2:00 p.m. on April 12 in Room 150 of the Electrical Power Technology Center (EPTC). This event is free and open to any interested student or prospective student. Call Instructor Steve Lewis to sign up for this great opportunity!

Power up your career with a degree in Electrical Systems Technology!

Informational visit with Consumers Rep Bob Johnson:
Tuesday, April 12
2:00 p.m.
EPTC 150
